

Responsible Rigging for Haddock Fishing

Use a simple bait rig to fish responsibly for haddock while preserving local cod populations.

- **Your catch rates will be higher!**
You will double your catch rate of haddock if you use baited hooks instead of a jig.
- **It will help you avoid cod.**
You are more than 2.5 times more likely to catch haddock than cod when using baited hooks.
- **You will injure the fish less.**
Jigs are at least 10 times more likely to severely injure cod or haddock.

These recommendations are a product of a multi-year collaborative research effort. The Division of Marine Fisheries, the New England Aquarium's Anderson Cabot Center, Rutgers University and UMass Dartmouth worked with the recreational fisher industry to study release mortality in the Gulf of Maine. Funding for this project provided by NOAA's Bycatch Reduction Engineering Program. [Award #NA17NMF4720253]

Support from the National Marine Sanctuary Foundation made this project possible.
